```
                             OPTIONAL RAM

  The expansion RAM chip (Cat.No. 26-2853) expands the printer's
  temporary memory to 40K bytes (internal 8K plus an additional 32K).
  Take your printer to a Radio Shack Service Center to have the chip
  installed.  Installation MUST be done by Service Center.
```

```
Menu Options:
```

The OPTN RAM Group appears only when you define macros with the optional
RAM chip installed. Press SELECT when the SPECIAL/SET? message appears
after the CHR TABLE menu group. The settings in this menu are common to
all four macros.

The setup menu option will display on the LCD as follows:

    Group   Item   Set
    SPECIAL   OPTN RAM   BUFFER, DOWNLOAD

    Note: BUFFER is the default mode.

The optional RAM can be used in one of two ways for the IBM emulation of
the DMP-240. The additional 32-K byte RAM area can be used as an additional
receive buffer (BUFFER), or an IBM font download area (DOWNLOAD).

The Epson mode of the printer will only allow the optional ram to be used
as an additional receive buffer (BUFFER). If (DOWNLOAD) is selected, the
optional RAM area is disabled.
